

CarbonControl™

Smart HVAC Optimization for Commercial Buildings

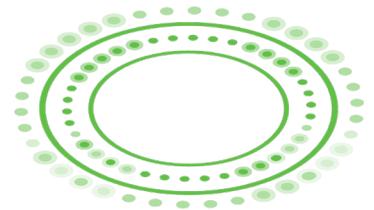

Reduce carbon emissions and energy costs with **AI-powered HVAC control**

The Challenge

Small-to-medium commercial buildings typically lack sophisticated building management systems (BMS), resulting in:

- Unnecessary energy waste
- Higher carbon emissions
- Increased operational costs
- Missed opportunities for efficiency gains

Our Solution: CarbonControl™

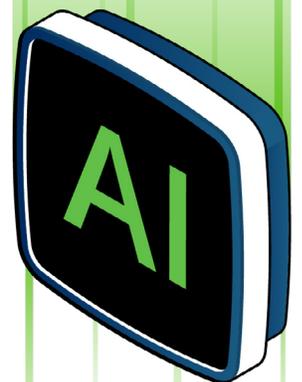

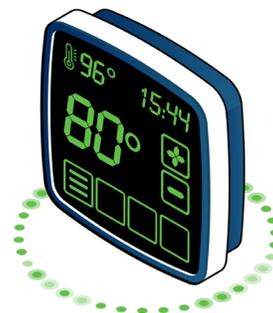

A cloud-based HVAC optimization platform that brings enterprise-level efficiency to buildings of all sizes

Machine Learning Optimization

- AI algorithms predict optimal RTU control settings every 15 minutes
- 24/7 automated adjustments balance comfort and efficiency
- Continuous learning adapts to your building's unique patterns

Plug-and-Play Installation

- Commercial-grade WiFi thermostats
- No complex BMS infrastructure required
- Standard HVAC technician installation
- Minimal disruption to operations

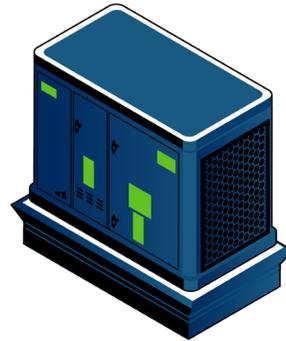

Key Benefits

- **20-30% Energy Savings** Proven results from NYC pilot program
- **1-2 Year ROI** Quick payback with minimal upfront investment
- **Zero Comfort Impact** Maintains optimal tenant conditions
- **Reduced Carbon Footprint** Lower emissions through smart control
- **Enterprise-Level Features** Advanced capabilities without enterprise costs

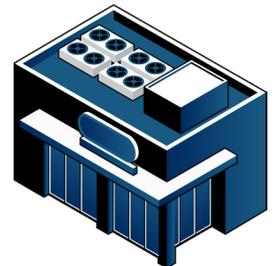

Perfect For:

- Small-to-medium commercial buildings
- Properties with rooftop package units (RTUs)
- Facilities without existing BMS
- Organizations committed to sustainability
- Property managers seeking operational efficiency

Why CarbonControl?

- **Affordable Alternative to BMS:** Get advanced control without the complexity
- **Rapid Implementation:** Up and running in days, not months
- **Proven Technology:** Machine learning algorithms delivering real results
- **No Maintenance Hassle:** Cloud-based solution with remote monitoring
